

Dura-Power MANIFOLD KITS

MODELS DVE-52, 80, 120 AND DRE-52, 80, 120, AND DSE-65, 80, 100, 120

Precision cut type "L" all copper tube manifold kits assure water flow balance of all units. Without this balance, the full water heating and storage potential of the system cannot be achieved. All tubing, elbows and valves required for manifold construction as illustrated are contained in the kit.

Dimensions shown are for minimum space occupied by complete assemblies. Service space in front of the units must be added. The manifold kits are provided with gate valves to isolate units for servicing.

¹ The model number indicates the normal tank size in U.S. gallons. Exceptions: 120 which is listed as 119 gallons.

² Unbalanced 3 Ø - convertible to 1 Ø.

³ Recovery based on full kw operation for one hour.
Figured at 1 kw 4.1 gallons @ 100°F rise.

⁴ + Convertible to 1 Ø or 3 Ø.
• Convertible to 3 Ø.

⁵ Condition phase convertability, see spec. sheet.

⁶ All are for general purpose hot water and can be used for dishwasher rinse (except DEL/DEN), also check Approvals column if NSF is required.
Only special application notes are listed.

⁷ Y connected elements operate at 277 volts 1 Ø in 480 volt 3 Ø circuit.

⁸ CM model CSA listed only.
