APPLICATION TYPE DIAGRAM
SEE INSTALLATION MANUAL FOR
COMPLETE INSTRUCTIONS

LINEAR-TEMP* SYSTEM

300-2, 399-2, 420-2, 520-2 OR 670-2

INSTALL IN ACCORDANCE WITH LOCAL CODES.

SECONDARY PUMP AND PIPE SELECTION DATA FOR
CONNECTIONS TO EACH PAIR OF BOILERS

Boiler Model	Temp. Rise †	Secondary Piping	Boiler Pump Selection	Boiler Inlet & Outlet
(2) HW-300	20° 30° 40°	2" 1-1/2" 1-1/4"	2" 2" SH-1	1-1/4"
(1) HW-300 with (1) HW-399 **	20° 30° 40°	2-1/2" 2" 1-1/2"	60-13 2-1/2" 2"	HW-300 1-1/4" HW-399 1-1/2"
(1) HW-300 with (1) HW-420 **	20° 30°	2-1/2" 2"	60-13" 2-1/2"	HW-300 1-1/4" HW-420 1-1/2"
(2) HW-399	20° 30° 40°	2" 2" 1-1/2"	60-14 2-1/2" 2"	1-1/2"
(2) HW-420	20° 30° 40°	2" 2" 1-1/2"	60-14 2-1/2" 2"	1-1/2"
(2) HW-520	20° 30° 40°	2-1/2" 2" 2"	60-14 2-1/2" 2"	2"
(2) HW-670	20° 30° 35° 40°	3" 2-1/2" 2-1/2" 2-1/2"	60-19 60-14 60-13 2-1/2"	2"

1. BALL VALVE
2. THERMOMETER
3. BOILER CIRCULATING PUMP
4. RELIEF VALVE
5. SAFETY LIMIT CONTROL (If Required)
6. SAFETY FLOW SWITCH

† **NOTE:** Make most economical selection of secondary pump and piping to provide a temperature rise compatible with system design temperature and highest expected boiler inlet temperature. Example system design at:
220° use 20° temp. rise
210° use 30° temp. rise
200° or less use 40° temp. rise

ASSUMING THAT PRIMARY PUMPING IS SIZED FOR A 20° TEMPERATURE DROP!

Secondary flow rate should not create a temperature rise that will force boiler temperatures up to the 240° maximum setting of limit controls.

** Flow rates through unequal models must be adjusted to establish equal temperature rise.
