Custom Door Index		Pages
Custom Pivot/Swing Shower Doors	Styles S1 thru S14	4-31
Custom Sliding Bath & Shower Doors	Styles TS1 thru TS9	32-49
Custom Neo Angle Shower Doors	Style N1 thru N5	50-59

1 Select either a bath or shower door.

Bath Door
For a bath or bath/shower combination.

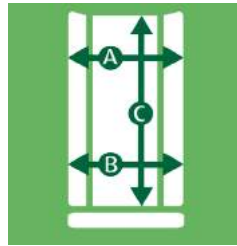

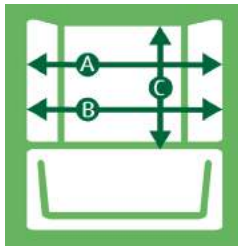

Shower Door
For a unit designed exclusively for showering.

2 Determine your door size.

Step-by-Step Measurement Instructions

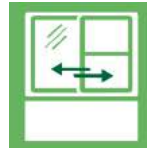

Correct measurements are critical.

- Measure distance from wall to wall at both top and bottom of opening (A & B). These measurements may vary.
- Select door with maximum opening size equal to, or slightly **greater** than, your largest measurement.
- Measure distance from top of the bath ledge or shower base to top of the bath/shower, shower wall unit or tile wall where you want the door to be located (C).
- Select a door with desired height equal to, or slightly **less** than, your measurement.

IMPORTANT: When measuring the height (C), do not measure to the top of the bath/shower, shower unit or tile wall if there is a beveled or radius top edge. Keep the height measurement to the lowest starting point of the bevel or radius.

3 Choose a door type and frame option.

Sliding

Two overlapping glass panels that slide back and forth along a bottom track.

Pivot

This door swings out from the wall like a traditional door, even when walls are not parallel. Pivot doors provide the greatest range of adjustability.

Neo-Angle/Corner

These space-saving doors include fixed panels on either side of the door and are ideal for smaller bathrooms.

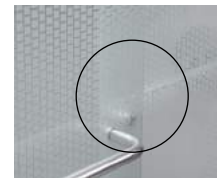

Framed

Aluminum frame mounted to the edges of the glass door panel adds structure to the glass.

Frameless

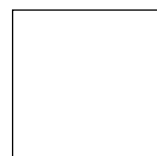

Minimal metal framing creates a sophisticated look and feel. Thicker glass is used to eliminate the need for structural framing.

4 Select a frame finish that complements your décor.

Available frame finishes will be listed on each door style. See following pages to order.

5 Select a glass texture that completes your space.
