NOTE

Following the Federal mandate for water efficiency outlined in the Environmental Protection Act of 1992, Faucets can be rated for water consumption based on two categories: flow rate and water consumption. With the "Water Consumption" standard, a faucet must not use more than 0.25 gallons of water per cycle. TOTO® faucet with a 10 second cycle uses 0.09 gallons of water, or 0.5 gallons per minute. This is 64% and 55% below Federal baseline of 0.25gpc and 55% below Calgreen's baseline of 0.20gpc. Furthermore, an innovative design feature incorporated into all TOTO electronic faucets is an "ON-DEMAND" mode. This means that the faucet will only deliver water as needed and will not run the entire duration of its rated cycle. This guarantees additional water savings. TOTO uses water consumption standard because it is the most accurate method of measuring water use. This method of measurement can be incorporated into water usage calculations for various efficiency programs. For more information, please consult www.totousa.com

*Water pressures over 80 psi are not recommended for most plumbing fixtures.
